Sommaire

Introduction générale

Aujourd'hui, le commerce électronique est considéré comme un dossier prioritaire par de nombreuses organisations internationales, surtout depuis que les problèmes liés à la facture numérique ramènent les politiques des technologies de l'information, de la communication et du développement sur les devant de l'actualité.

Des recommandations stratégiques spécifiques ont été formulées dans différent domaine : infrastructure et services de télécommunications, fiscalité, protection du consommateur, sécurité des réseaux, protection de la vie privée et des données. La confiance est un élément crucial pour le développement du commerce électronique. Il s'agit, essentiellement, d'assurer aux consommateurs et à l'entreprise des services de réseaux sures, fiables et vérifiables.

Dans ce cadre que s'inscrit notre projet qui consiste à de mettre en place un site web pour l'achat et vente en ligne.

Chapitre1 : Etude des besoins

I.   Introduction

Durant le premier chapitre intitulé cadre de travail, on présente les besoins fonctionnels et non

fonctionnels de notre application.

II.   Les besoins fonctionnels

Le site web doit assurer aux acheteurs les fonctionnalités suivantes :

- Consultation des articles.

- Gestion panier :

  ➢ Ajout, suppression d'un article du panier et réduire le nombre d'article dans un

     panier.

- Gestion compte :

  ➢ Ajout, modification d'un compte.

- Consultation de la liste de ses commandes.

- Recherche d'un article

- Authentification

L'application doit assurer au vendeur les fonctionnalités suivantes :

- Gestion des articles :

  ➢ Ajout, modification et suppression d'un article.

- Gestion d'une boutique :

  ➢ Ajout, modification et suppression d'une boutique.

- Recherche d'article.

- Gestion compte :

  ➢ Ajout, modification d'un compte.

- Authentification

III. Besoins non fonctionnels

Une fois les besoins fonctionnels sont bien définis, les besoins non fonctionnels doivent être

Pris en compte tout au long du processus de développement de site web à savoir :

- **La portabilité :** Le site web doit être capable de fonctionner dans un environnement matériel ou logiciel différent de son environnement initial.

- **La sécurité :** Le site web doit présenter un espace sécurisé pour ses utilisateurs en assurant un processus d'authentification rigoureux.

- **L'ergonomie :** Toute interface de notre site web doit être convivial facile à comprendre et à exploiter par l'utilisateur.

- **La fiabilité :** En cas de panne pendant l'utilisation, il faudra minimiser la perte de données et ressortir de tout type de blocage.

Conclusion

Au cours de ce chapitre nous avons étudié les besoins fonctionnels et non fonctionnels de notre application. Cette étude nous aidera dans l'étape de conception.

Chapitre2 : Analyse et Conception

I.   Introduction

Le choix d'une méthodologie de conception va nous permettre de mettre en place un produit

robuste, fiable et évolutif. Dans ce chapitre nous détaillons la conception de notre site web.

Ainsi, nous présentons la conception de notre base de données et les modules de base.

II.   Outil de conception

UML est une notation permettent de modéliser un problème de façon standard. Ce langage est

né de la fusion de plusieurs méthodes existantes auparavant, et est devenu désormais la

référence en termes de modélisation objet. Nous avons choisi UML comme langage de

conception vu sa simplicité et sa puissance à l'abstraction des objets réels. Parmi les facteurs

de puissance, UML présente plusieurs diagrammes statiques et dynamiques facilitant la tache

de conception et offrant une vue globale sue la composition et le fonctionnement de note

logiciel.

III. Diagramme de cas d'utilisation

Le diagramme de cas d'utilisation représente la structure des fonctionnalités nécessaires aux utilisateurs du système. A partir de l'étude préliminaire, nous avons pu dégager le diagramme des cas d'utilisation général suivant :

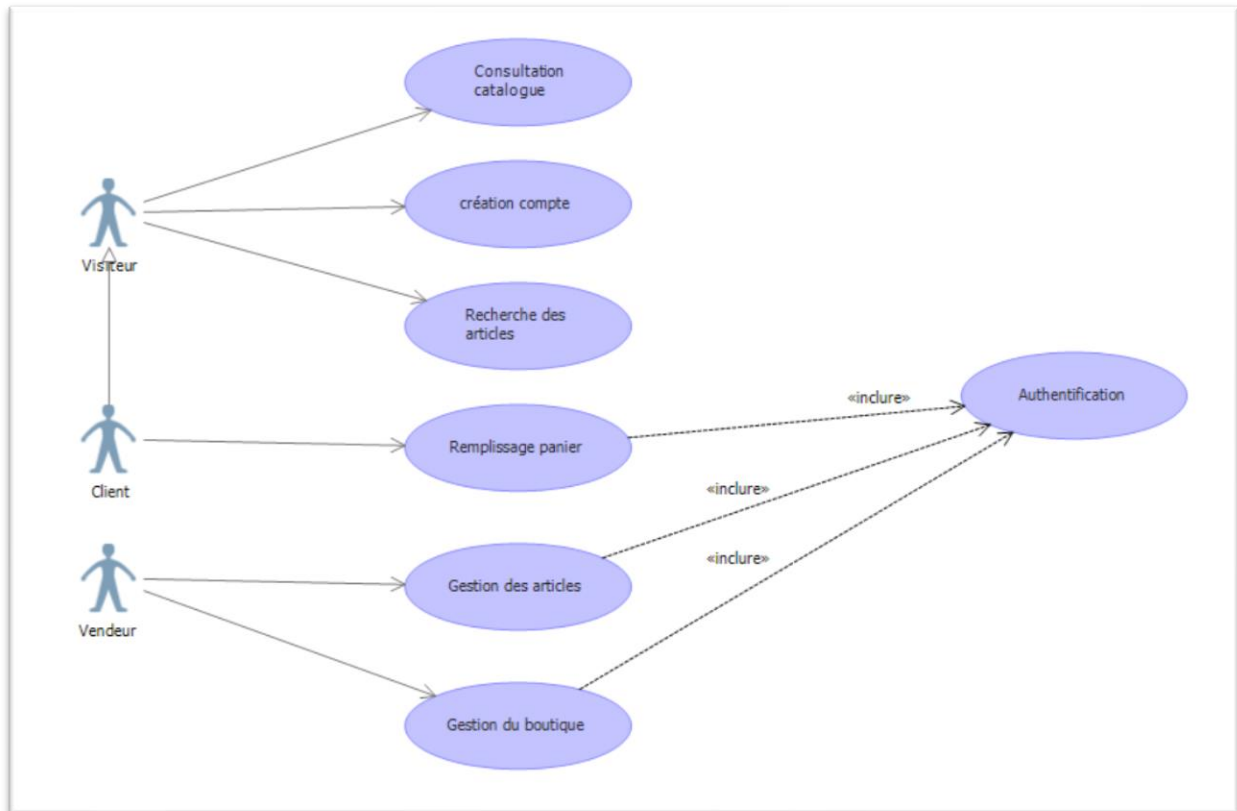

Figure 1: Diagramme de cas d'utilisation générale

IV. Diagramme de classes

Dans cette section, nous allons présenter le diagramme des classes de la base de données :

Chapitre3 : Réalisation

I.   Démonstrations des interfaces :

Cette partie dénombre la présentation des Scénarios applicatifs de l'application. Nous allons présenter dans ce qui suit, les imprimes-écran des principales interfaces réalisées dans notre site web.
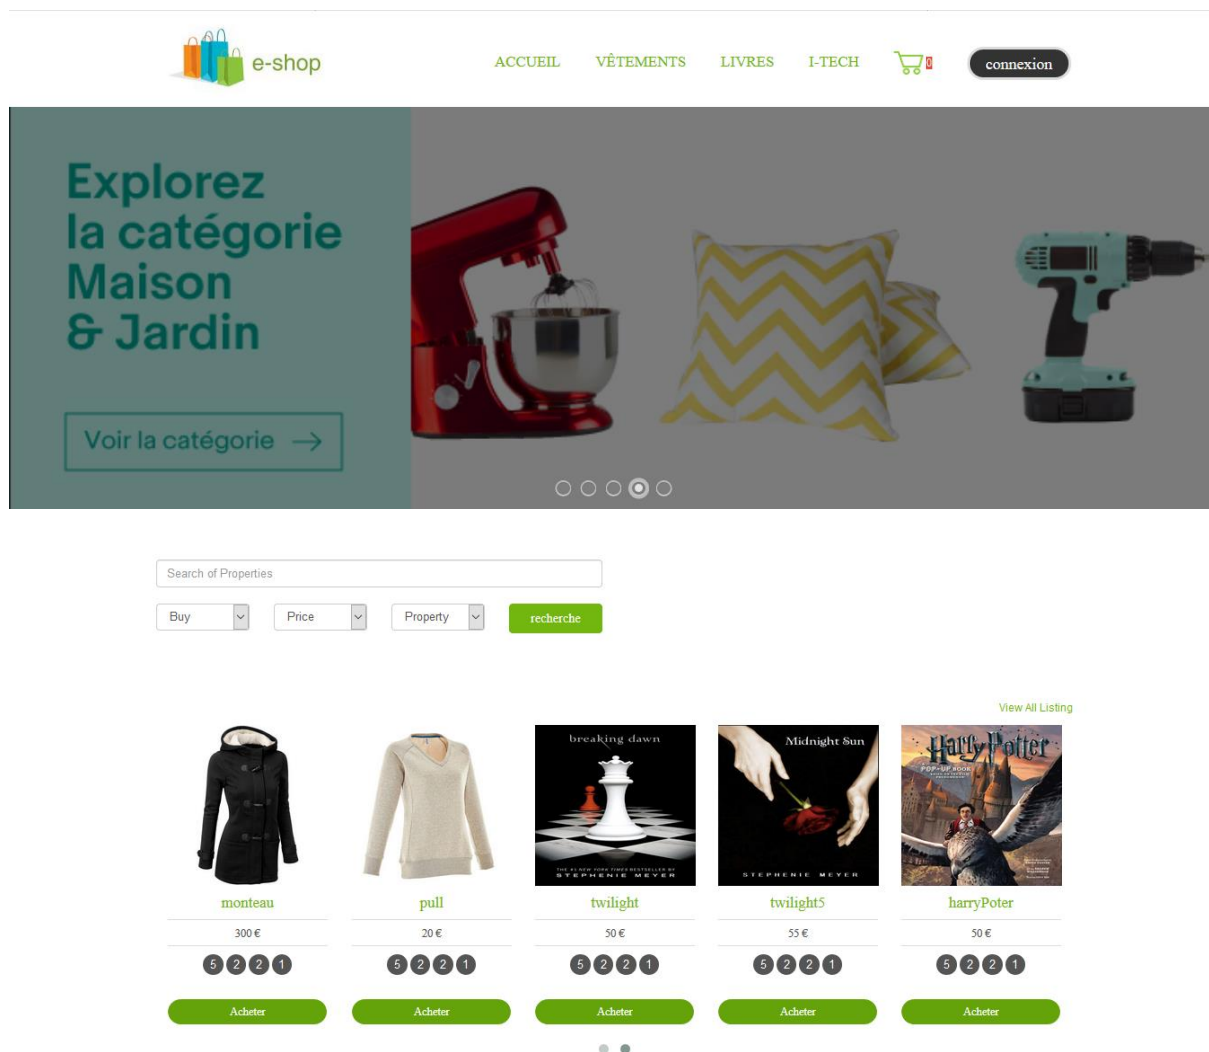

Page d'accueil

C'est la page d'accueil qui s'affiche dès l'accès à notre site web.

Le visiteur peut consulter les articles selon la catégorie (vêtement, livres, I-tech)
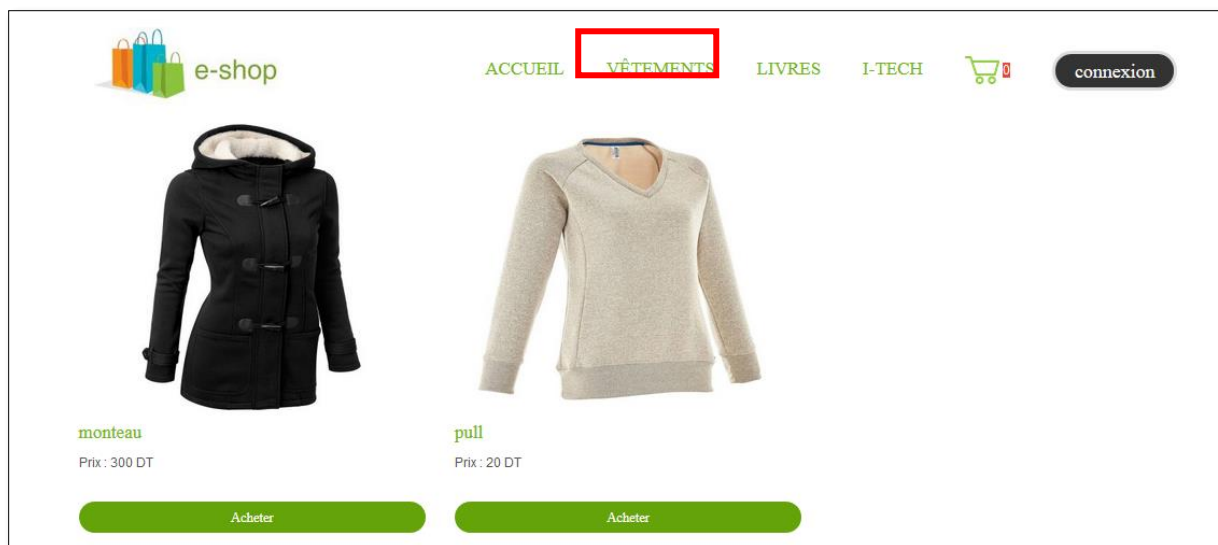

Liste vêtements

Liste des livres

Liste des I-tech

Panier d'un acheteur

Le visiteur peut consulter son panier, supprimer un article du panier ou bien réduire le nombre d'article du panier.

Page Authentification

Le visiteur doit s'authentifier, pour cela il introduit son login et son mot de passe. Selon sa fonction ce dernier est redirigé vers son propre profil.

Page créer compte

En s'authentifiant en tant qu'acheteur l'interface suivante sera affichée.
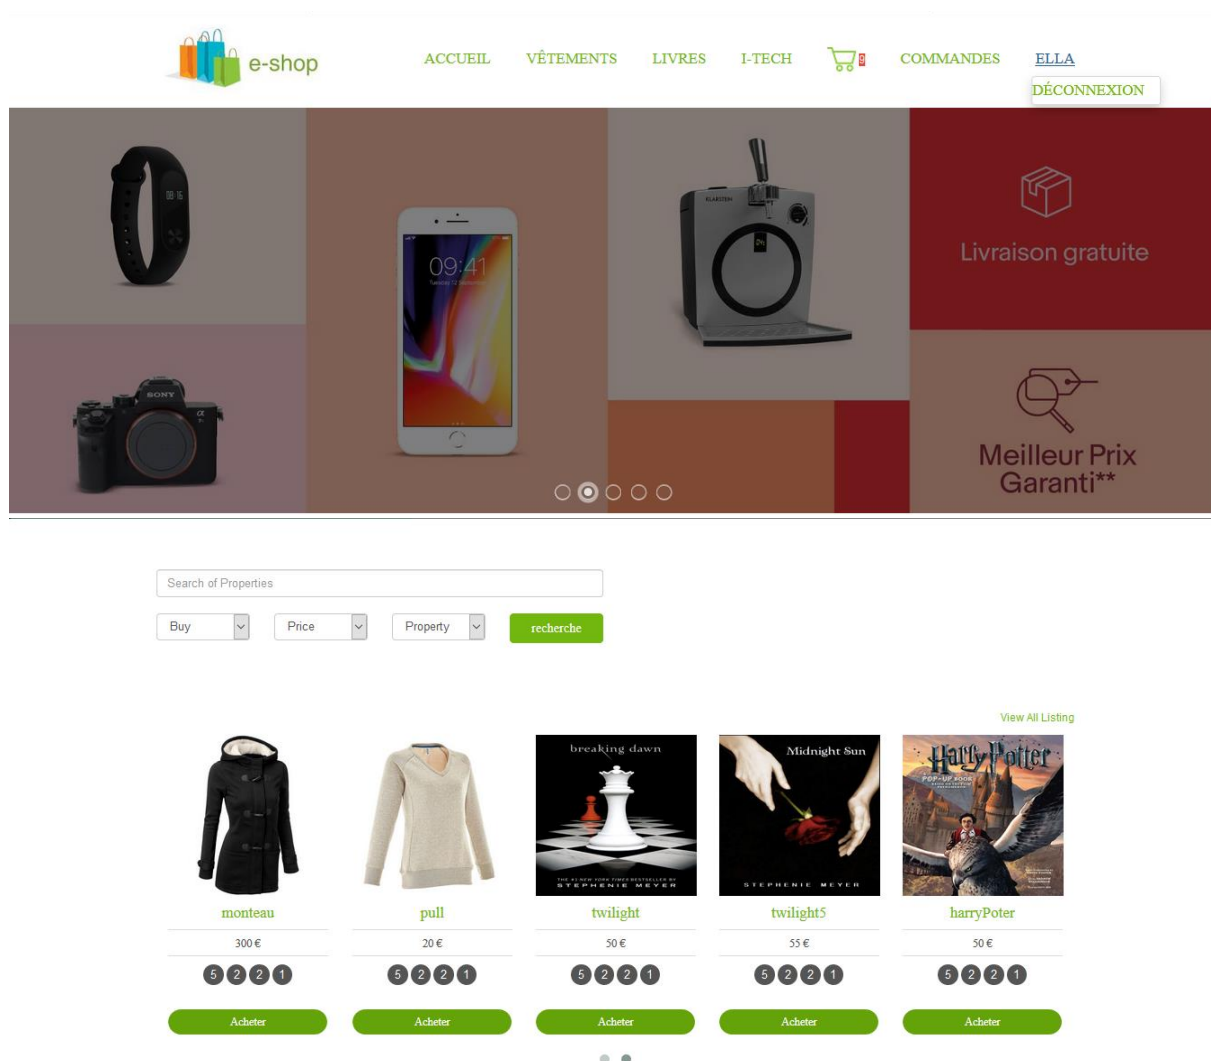

Page d'accueil acheteur

En cliquant sur commandes la liste des commandes passé par l'acheteur sera affichée.
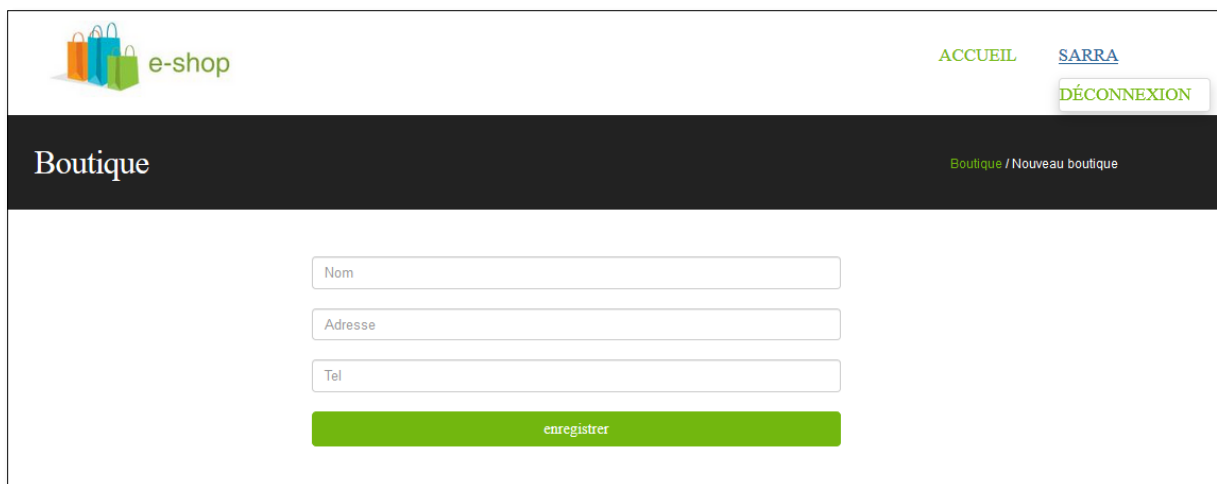

Liste des commandes

En s'authentifiant en tant que vendeur l'interface suivante sera affichée.

Page d'accueil vendeur 1

En cliquant sur « Nouveau boutique » une interface dédiée à l'initialisation d'une nouvelle boutique.

Page Ajout boutique
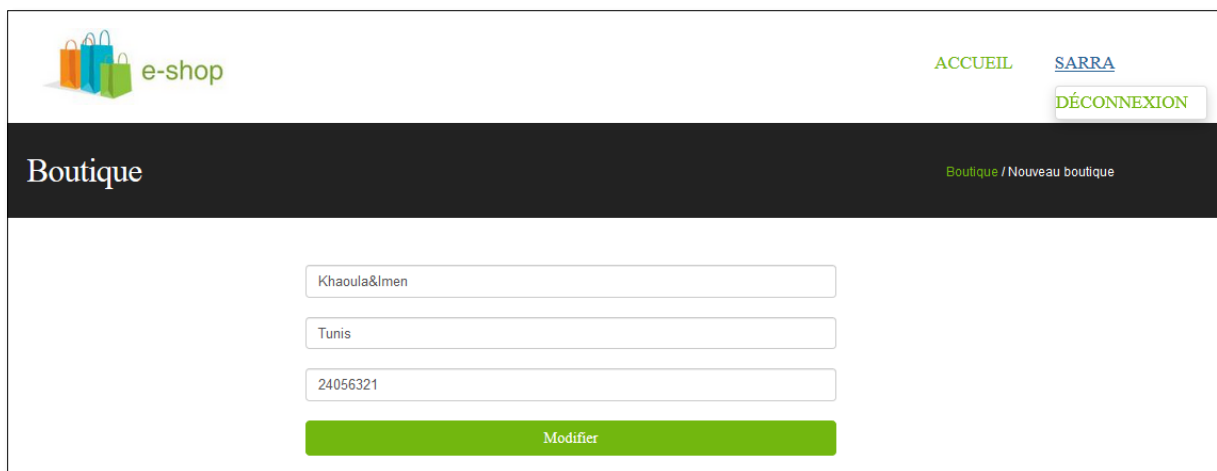

Après la création d'une boutique, le vendeur n'a le droit que de consulter, supprimer ou bien modifier sa boutique.

Page d'accueil vendeur 2
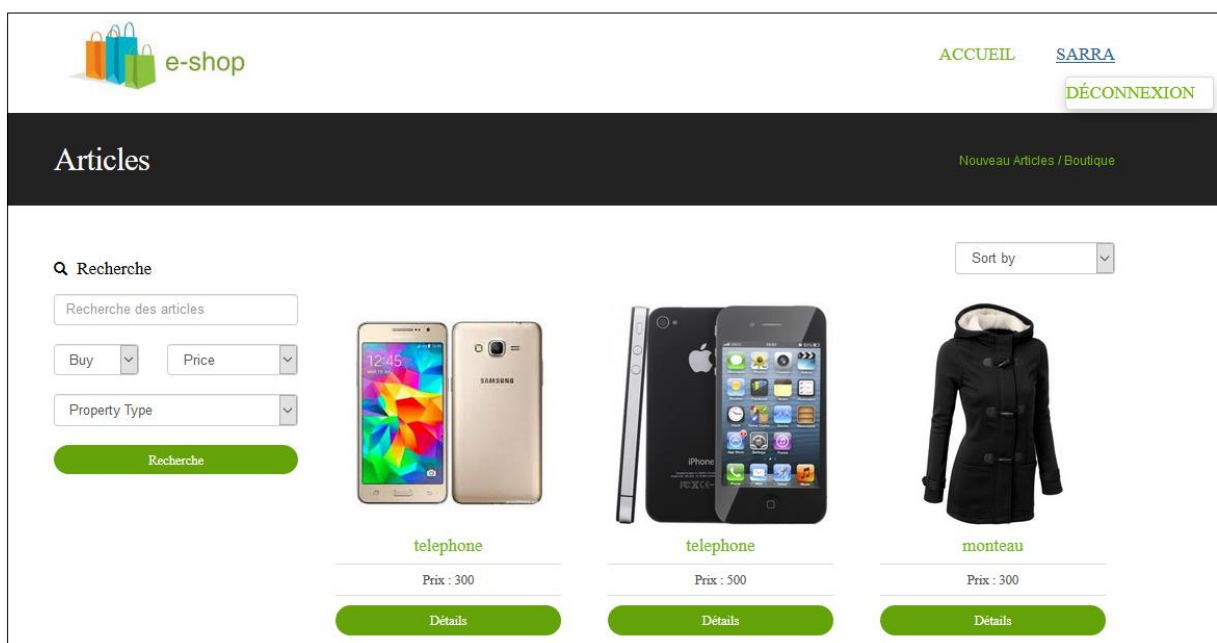

En cliquant sur « modifier » un formulaire de modification d'une boutique sera affichée.

Modifier boutique

En cliquant sur « détails » la liste des articles ajouté par le vendeur sera affichée.

Détails boutique

Le vendeur peut consulter les détails d'un article.

En cliquant sur « Nouveau Article » un formulaire dédiée à l'initialisation d'un nouveau article sera affiché.

Ajouter article

II.   Codes sources :

A.   Controllers:

<u>Article Controller:</u>

Affichage de la page d'accueil avec liste des articles récupérer à partir de la base de données.

```php
public function index(){
    $articles = Article::all();
    return view( view: 'welcome')->with('articles', $articles);
}
```

Ajouter un article au panier

```php
public function addItem($id){
    $article = Article::find($id);
    $currentCart = Session::has('panier') ? Session::get('panier') : null;
    $panier = new Panier($currentCart);
    $panier->add($article->id, $article);

    Session::put('panier', $panier);
    Session::save();
    return redirect()->route( route: 'article.index')->with('success', 'Nouvel article ajouté au panier!');

}
```

Affichage du panier

```php
public function getCart(){

Enregistrer panier dans la base de données

```php
public function postCheckout(){

        return redirect()->route( route: 'article.index')->with('error', 'Merci de vous connecter');
    }

    $totalP = Session::get('panier')->totalP * 100;
    // Set your secret key: remember to change this to your live secret key in production
    // See your keys here: https://dashboard.stripe.com/account/apikeys

    $cart = Session::get('panier');

    $acheteur = new Acheteur();
